

Send me your Flying Pictures and Video clips.

With emailing videos (MP4 files) the size limit with gmail is 25 mb (other email services may vary). Which is a small and short video. Videos use a lot of data. When the file exceeds the 25 mb limit it will upload the video to Google Drive and insert a link in the email where the recipient can go download it. That works for me!

Or you can send me a thumb drive with your pics & video. I will return it to you.

Would love to see some of

- gas-powered planes getting ready, starting up, and flying.
- Preparing electrics for flight and flying.
- Aerobatics
- Pre-flight checks before taking off

So, you can send me your flying pictures and video clips. You can take pictures and 1080p video (most smart phones have that) and send them to me at: JtownRCWebmaster@gmail.com

Some smart phones will do up to 4K video. But that takes up a lot more space and slower to upload/download.

Just send me anything and I can make a collage of it. 😊👍

Thanks! Gary
